

# Clinical Research Project Title

Author name, Degree, Title, Affiliation

## Background and Context

- Literature Review – findings of previous related research
- Context of your study – current standard of care approach/treatment/protocol/etc.
- Significance of the topic and current health outcomes

## Hypothesis / Aims

To investigate how well the new approach/treatment/protocol/etc. was accepted by patients and health outcomes.

**Hypothesis 1**

**Hypothesis 2**

**Hypothesis 3**

## Research Methods

- Inclusion Criteria
- Data Collection
- Data Analysis
- How did you measure your outcomes?

## Results / Findings

- Helpful to maintain same order as hypotheses / aims
- What outcomes did you measure?

## Discussion / Limitations / Conclusions

- Are your results consistent with, or do they conflict with your hypothesis?
- Limitations of current study data set and/or analysis
- Limitations of conclusions or generalized application of conclusions

## Next Steps / Future Directions

- Address limitations previously cited
- What should the next studies look like?

## References

- Literature or other references guiding the study design and/or informing discussion & conclusions

## Acknowledgements

- Funding source(s) and other material support
- Critical guidance
